

Plans cadastraux des espaces des communes constituant le cœur du parc national de forêts

Annexés au décret créant le Parc national de forêts

NOTE AU LECTEUR

Cet atlas présente les plans cadastraux des espaces des communes constituant le cœur du parc national, sur la base du périmètre validé par l'Assemblée générale du GIP en date du 20 juin 2019.

Le cœur du parc national est avant tout un espace de préservation et de mise en valeur des patrimoines naturels, culturels et paysagers. Il rassemble la plupart des richesses pour lesquels les acteurs de la charte partagent une responsabilité et une ambition de préservation. C'est une « vitrine » des patrimoines et des savoir-faire, un espace conservatoire de cibles à forte valeur patrimoniale locale, régionale et nationale. Sa délimitation prend en compte les usages des terrains qu'il comprend. Il respecte le droit fondamental de la propriété.

Le cœur du Parc national s'étend sur 56 614 hectares répartis sur 60 communes dont 31 en Côte D'or et 29 en Haute-Marne.

Pour chacune des communes concernées, le présent atlas comprend :

- une carte communale présentant les sections cadastrales incluses tout ou partie en cœur.
- une (ou des) carte(s) par section cadastrale concernée par le cœur, présentant les parcelles cadastrales incluses tout ou partie en cœur.

Sources des données :

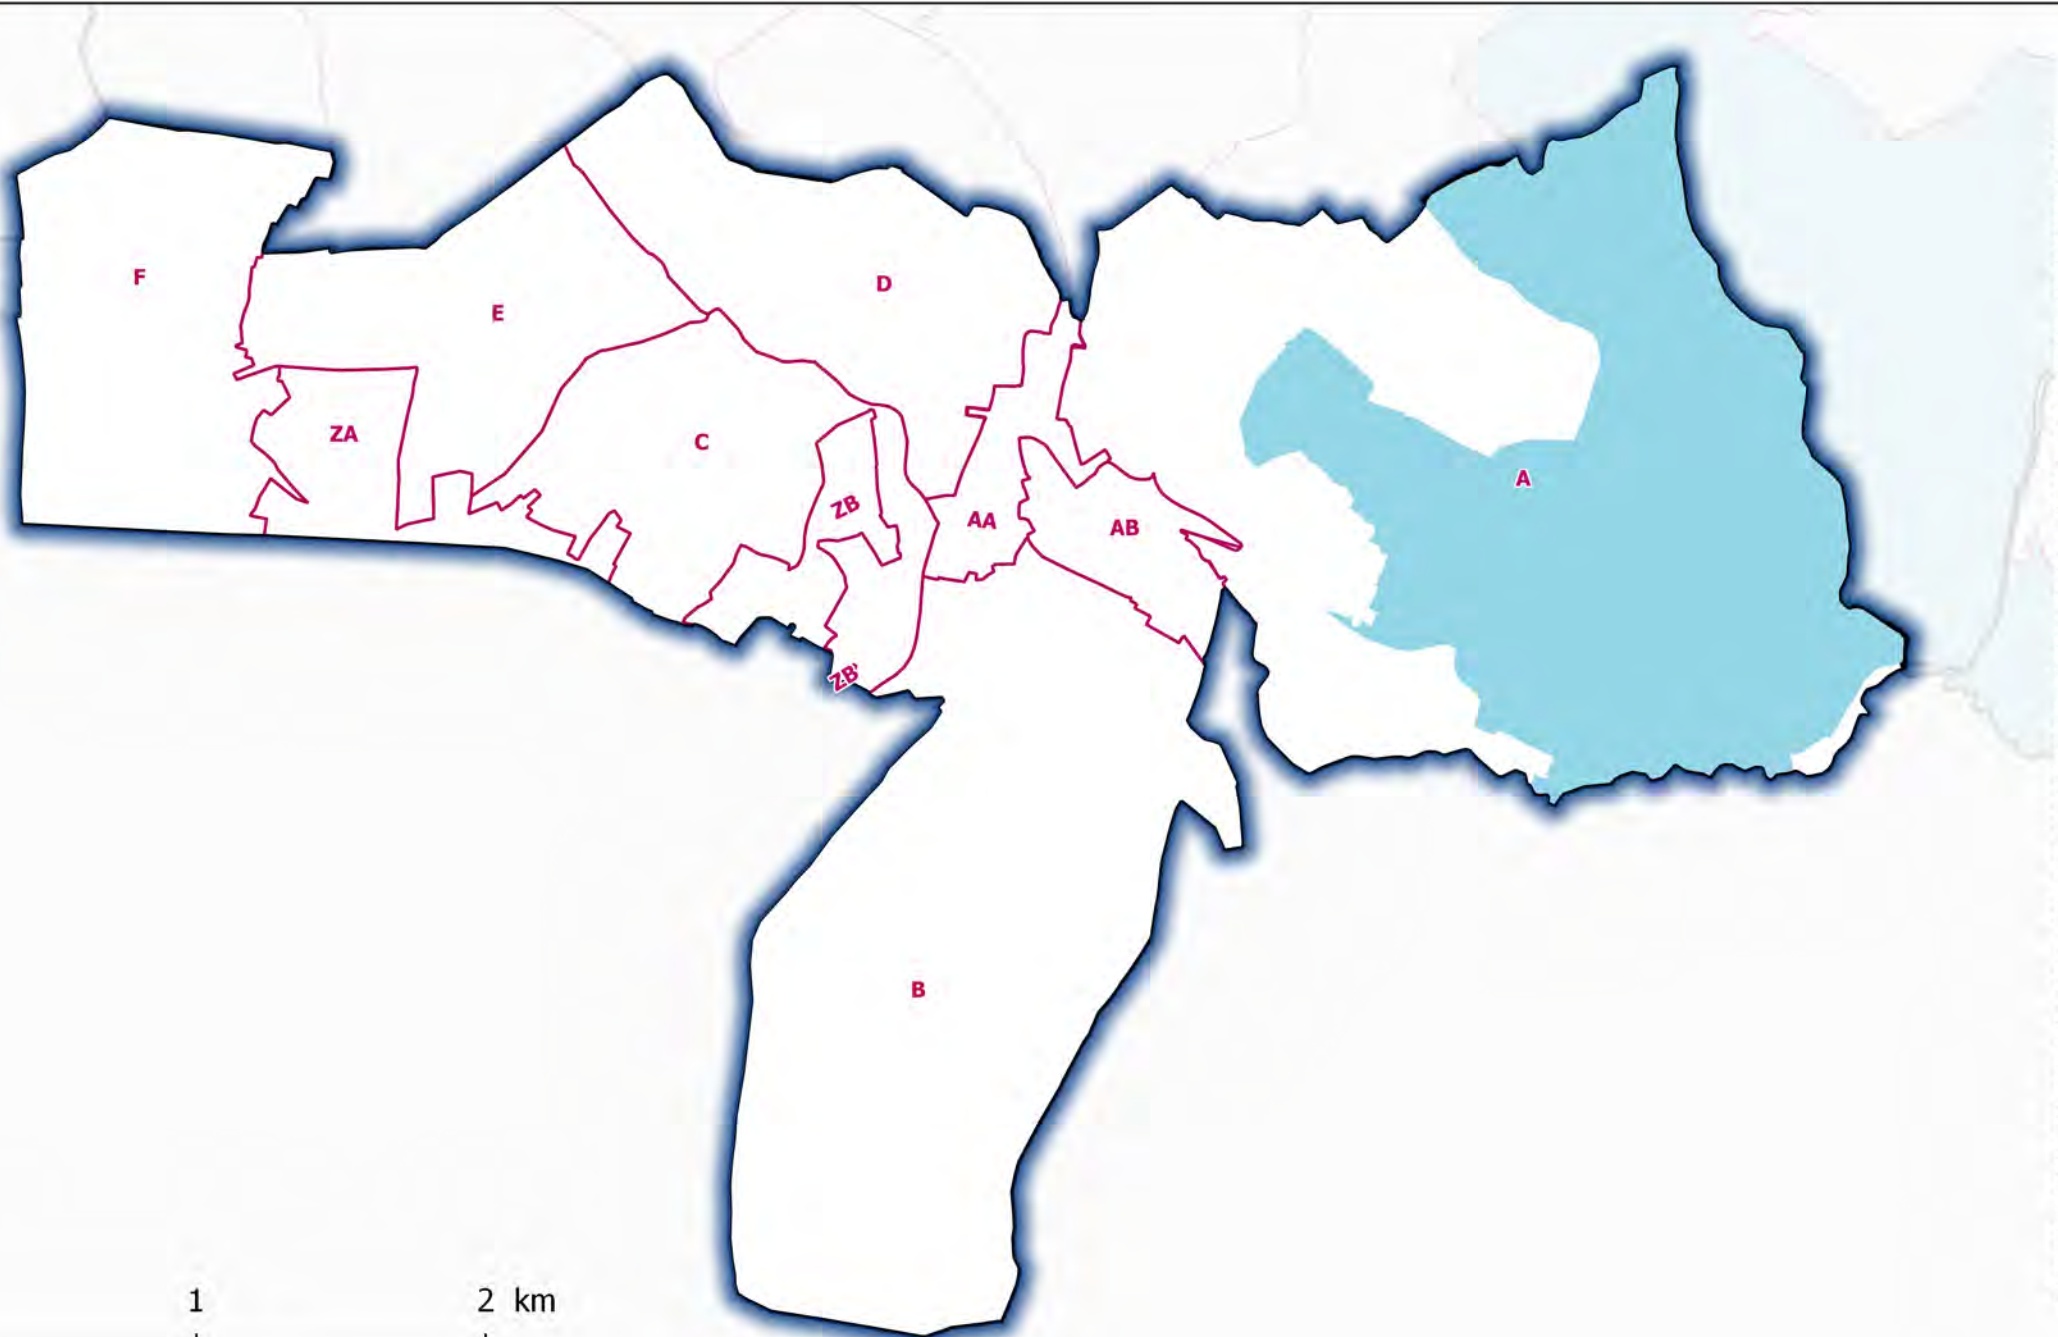

- Pour la partie Côte-d'Or : Cadastre millésimé avril 2019 obtenu en open data (données de référence Etalab)
- Pour la partie Haute-Marne : Cadastre millésimé avril 2019 obtenu auprès du CD52 (partenariat DGFIP 52)
